

# Legal keeps asking for ChatGPT Data. Set it up once and step back.

Few workplace tools have moved from novelty to default as fast as ChatGPT. Your teams now use it daily troubleshoot engineering problems, document design decisions, summarize technical specs, and draft supplier and partner communications. Every interaction adds to the discoverable record, and the burden on IT to locate, preserve, and produce data. Onna's no-code ChatGPT connector lets you stand up secure, admin-controlled collection that legal runs without filing a ticket.

### Set it and forget it about it

Once you set up the connector legal can collect, search, and cull ChatGPT data themselves, so routine data-pull requests stop landing on IT.

### Secure and governed

Admin-managed connections, identity mapping, role-based access, and audit logging on an enterprise-grade platform.

### One platform, every source

Manage ChatGPT alongside 29+ connectors from one platform, with visibility across your tech stack.

## Onna's ChatGPT eDiscovery Workflow

**Access.** Connect your ChatGPT Enterprise workspace to Onna through a prebuilt, no-code connector. Onna authenticates with your OpenAI API key and Workspace ID, then pulls conversations through the OpenAI Compliance Export API on a per-custodian basis. Auto-sync runs on a schedule to capture new activity, with no custom engineering to maintain.

**Analyze.** Legal searches ChatGPT alongside Slack, Teams, Zoom, Jira, Confluence, and the rest of your tech stack. They filter by custodian, date range, keyword, or data type and cull the dataset themselves, so data pulls stop landing on IT.

**Act.** Legal exports a review-ready dataset to outside counsel or send it straight into a review platform like Logikcull or Reveal. Role-based permissions and export logging keep you in control of what data leaves the platform and who can access it.

## It's time to collect the AI record. Talk to an expert today.

**Onna** is the leading data collection and management platform for eDiscovery. With 29+ no-code connectors, Onna gives legal and IT teams a defensible, single source of truth to access, analyze, and act on data across your collaboration tech stack.
