

The record is being written by AI. Onna is built to collect it.

Few workplace tools have moved from novelty to default as fast as ChatGPT. Teams now use it to troubleshoot engineering problems, document design decisions, summarize technical specs, and draft supplier and partner communications. AI is writing the discoverable record, and when an IP dispute, trade-secret matter, or investigation hits, you need that data fast. With Onna's ChatGPT connector, you can collect, preserve, search, and export ChatGPT interactions in one defensible workflow.

No IT ticket required

Run collection, preservation, and search autonomously, without waiting on IT.

Defensible by design

Custodian-based collection, audit logs, and chain of custody backed by OpenAI's immutable compliance log exports.

One platform, every source

Collect ChatGPT alongside 29+ other collaboration apps.

Less data, lower costs

Cull datasets by 70%+ before exporting, so you only pay to process and review what is relevant.

Onna's ChatGPT eDiscovery Workflow

Access. A prebuilt, no-code connector links your ChatGPT Enterprise workspace to Onna and pulls conversations through the OpenAI Compliance Export API on a per-custodian basis, so you can scope collection to the right custodians. Auto-sync runs on a schedule to capture new conversations as they become available.

Analyze. Search ChatGPT conversations alongside data from Slack, Teams, Zoom, Jira, Confluence, and the rest of your collaboration tech stack. Filter by custodian, date range, keyword, or data type, culling your dataset down by 70%+, cutting downstream review costs.

Act. Export your responsive dataset in a review-ready format with conversational structure intact. Whether you are sharing with outside counsel or pushing directly into a review platform like Logikcull or Reveal, you control what leaves the platform and who has access.

What gets collected:

- Conversation threads
- Custodian details
- Timestamps
- Model information
- Conversation title
- Edit history
- Source attributions
- Attachments

It's time to collect the AI record. Request a demo today.

Onna is the leading data collection and management platform for eDiscovery. With 29+ no-code connectors, Onna gives legal and IT teams a defensible, single source of truth to access, analyze, and act on data across your collaboration tech stack.
